Experience and Know-How - The Foundations for Your Training

With a GreCon system, you invested in a preventive fire protection system to protect your production. GreCon measuring systems help to optimise and monitor your production. The systems usually pay off quickly. To make optimum use of your system, the operators have to be 100 % familiar with it. GreCon offers you the solution for complete knowledge of the system.

The GreCon Academy was established for the education of our own staff as well as for the training of the staff of our customers, engineering offices, insurance companies, experts and others.

User Know-How

The sharing of knowledge is an important factor for the operation, use and technical service of our products. To act appropriately at the decisive moment is a guarantee for the efficient use of your system. We take the time for that. We prepare you and your staff for the use of GreCon technology.

GreCon Academy

Our trainers and moderators are practitioners of the sales, engineering, certification, health and safety, development and service areas.

We pass the knowledge of decades of experience on to the participants - in small groups and in a comfortable atmosphere. There are areas for theoretical training and combined theoretical and practical training. „Learning by doing“ is our motto for lasting success in the conveying of knowledge.

Contents

The programme of the GreCon Academy is varied. Courses for the elimination of minor troubles as well as operation, maintenance and service are available, as is demanding user or engineering training for measuring systems. An individual combination of contents is also possible after start of the training.

In basic public courses, we convey basic knowledge of the product areas spark extinguishing and measuring systems.

Training

The seminars include supportive educational materials, which can be used as an aid at your facility.

The training programme that is adapted to the requirements of your staff is held in German and/or English, as requested. Depending on the contents, the training lasts between one and five days. We are prepared to arrange individual training for you and to conduct the training on your company premises, if desired.
